Registration URL: <https://attendee.gotowebinar.com/register/7433563200592189186>

Description:

Teacher Empowerment cannot be actually rendered with some specific points and guidelines. It is a mind-set, philosophy and management strategy. It needs to be embedded into every component of the institution activities. While it is easy to bring it in the mainstream in the institutions with small size and less employee numbers. To implement it in large institutions it requires a lot of guts, encouragement and resources to put it in place. In an institution who plans to do this, needs to have a leadership, who will like to empower teachers not only as a policy but from the core of their heart and are real supporters of this philosophy. In this philosophy it is very important that the hiring is done very carefully and you can trust these faculty members and employees that they will feel proud of their freedom and empowerment and use it for the advantage of the institution. This will eventually leads to innovative ideas and new opportunities will knock the doors of the institution. There are examples of institutions who are doing very well by following this philosophy. Most of such schools, colleges and institutions are in advanced countries with higher human capital index. Finland is one example in case.

Presenter:

Professor Garg is a Ph.D in CSE and worked on predicting patterns in DNA sequences. His current areas of research includes data science and deep learning.
